

1.4 - Angle Measure

Goals Aligned to Common Core State Standards:

- You will identify rays, angles, and the vertex.
- You will measure and classify angles.
- You will identify and use congruent angles and the bisector of an angle.
- You will construct an angle that is congruent to a given angle and bisect an angle.
- MP 4, 5, 6

Measure Angles

- **Ray model:** 

Symbols: \overrightarrow{AB}

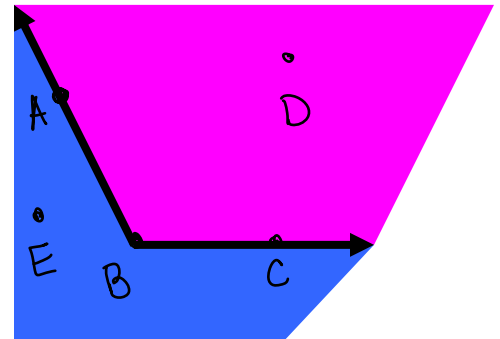

- Opposite rays 

*Line t has 2 rays \overrightarrow{MN} and \overrightarrow{ML} .

- **Angle:** 2 rays with the same endpoint (vertex)
 - Symbols:

- An angle divides a plane into 3 distinct parts.
- What points . . .
 - Lie on the angle:
Points A, B, C
 - Lie in the interior of the angle:
D.
 - Lie in the exterior of the angle:
E

1) Name all the angles that have R as its vertex.

$\angle 1, \angle 2, \angle 3, \angle PRT, \angle SRQ$

2) Name the sides of $\angle 1$.

\overrightarrow{RS}
 \overrightarrow{RP}

\overleftrightarrow{ST} (straight \angle)

3.) What is another name for $\angle 1$?

$\angle SRP$

Measuring Angles

What is used to measure an angle?

If angle PQR is 75 degrees, the correct notation would be:

$$m\angle PQR = 75$$

Remember: The letters represent sides and the angle. The letter in the middle represents the angle and the outside letters represents the sides.

- Label each angle as $\angle ABC$
- Measure the angles
- Classify the angles as acute, obtuse, or right and label them accordingly.

3)

4)

5) Draw a 48° angle.

6)

7)

8)

Your Homework Examples will look like the following:
Measure and classify each angle.

9) $\angle MPR$

10) $\angle RPN$

11) $\angle NPS$

Congruent Angles: Angles that have the same measure.

Model:

Symbols: $\angle 1 \cong \angle 2$

Cannot use protractor here!!!! Only use when worded like above

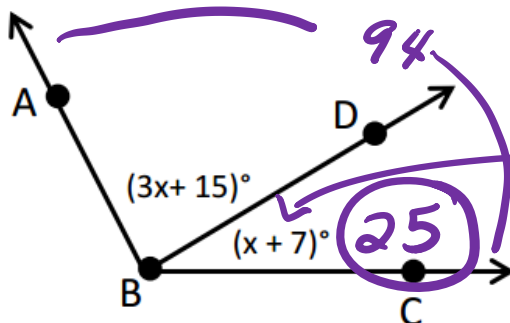

Ex: If $m\angle MPN = 2x + 14$ and $m\angle NPR = x + 34$, find x and $m\angle MPR$.

$$\begin{aligned} 2x + 14 &= x + 34 \\ -x &\quad -x \\ \hline x + 14 &= 34 \\ x &= 20 \end{aligned}$$

$$m\angle MPR = 108$$

Given $m\angle ABC = 94^\circ$, find $m\angle CBD$.

$$\begin{aligned} 3x + 15 + x + 7 &= 94 \\ 4x + 22 &= 94 \\ 4x &= 72 \\ x &= 18 \end{aligned}$$

Angle Bisector: cuts an \angle into 2 \cong parts

Find $m\angle ABC$ if \overrightarrow{BD} is an angle bisector.

$$2(3x-10) = 5x-5$$

$$3x-10 + 3x-10 = 5x-5$$

$$\frac{5x-5}{2} = 3x-10$$

$x=15$
 $m\angle ABC=70$

Pg. 39 Copy an Angle, Pg. 40 Bisect an Angle

Goals Aligned to Common Core State Standards:

- You can identify rays, angles, and the vertex.
- You can measure and classify angles.
- You can identify and use congruent angles and the bisector of an angle.
- You can construct an angle that is congruent to a given angle and bisect an angle.

Homework:

1.4 Pg. 41 #12, 16, 20, 25-41odd, 42, **52 challenge**
